

October 17, 1989

TO: Mr. Bruce Austin

FROM: (b) (6), CLCC Chairperson

MEMO: Sampling Frequency, Colbert Landfill Area wells

It has been brought to the attention of the Colbert Landfill Citizens Committee (CLCC) that the sampling frequency of the Hermsmeier Addition and other homesites is to be changed; to be cut in half or more. The CLCC as a group and the individual home owners strongly protest any move on your part to deviate from the currently established schedule of well sampling.

There has been no evidence presented to us that the levels of documented contamination are diminishing. To the contrary, the current increase in contamination in some wells would validate the predictions of potential contamination of the deeper wells occurring if the pilot project is unsuccessful in removing significant concentrations of the chlorinated hydrocarbons from the aquifer.

Please consider this letter a formal protest against changing the current sampling model and frequency.

cc: Mike Blum
